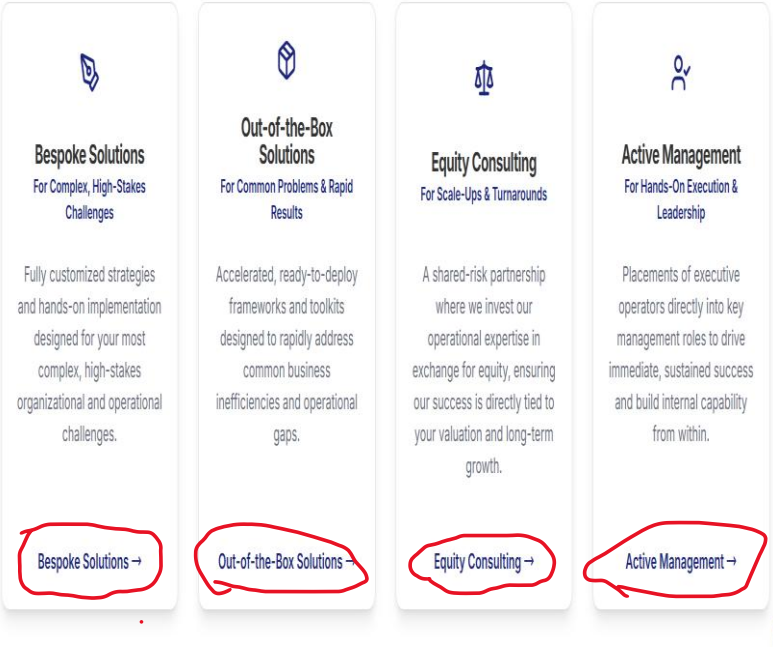
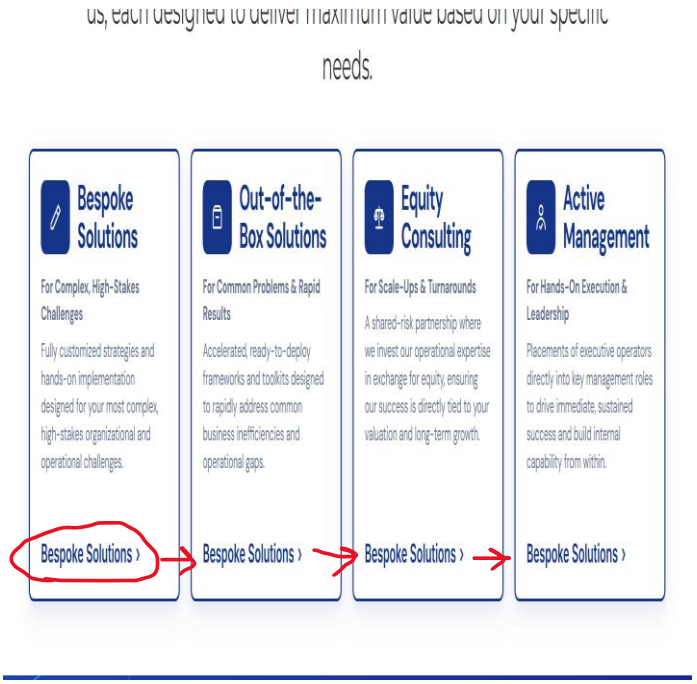
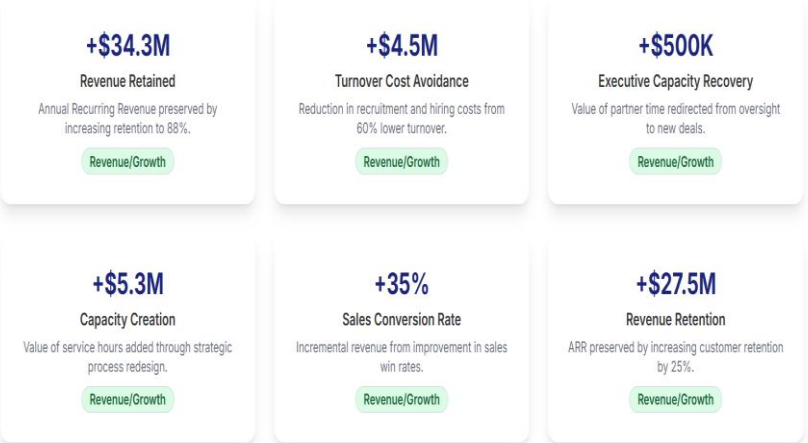
Our solutions

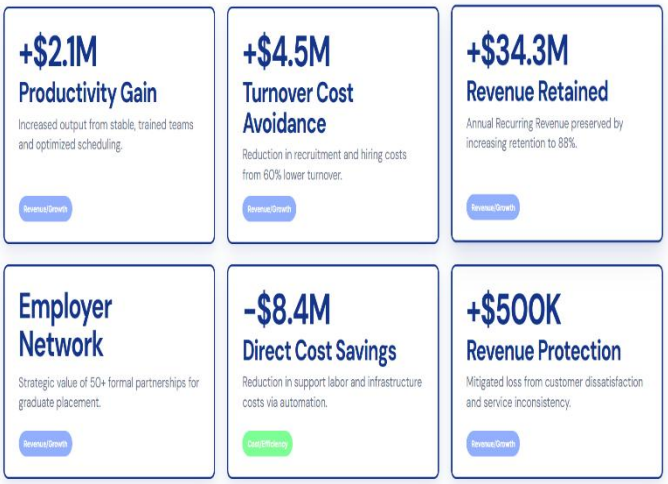
solutions and princing





here rounded words are not same in both websites





in same page there are cards in this some of percentages was not there

in **eqality solutions**
our ideal partner profile there is not there some content missing one
1)risk sharing mechanism
2)clear success metrices

Frequently Asked Questions

- Why do I need to apply for a partnership?
- What if you decline our partnership application?
- How does PMG determine how much equity to take?
- Do you take board seats or voting rights?
- How is this different from bringing on an investor or VC?
- Can I still raise capital from VCs or angel investors after partnering with PMG?
- Do you only work with startups, or do you also support later-stage companies?

here this frequently asked questions was not there in both website it was in only one website have this

in power of working with us page heading is missing

global network and strategic engagements

Why work with us in this page frame works are not exactly same in both websites

The I-O Model of Enterprise Architecture

4. Undocumented Fixes (The Hero Problem)

Organizational gaps and input rejections are often picked up by an unofficial Single Point of Failure (SPOF) person who manually patches the workflow, bypassing formal processes and logging.

Risk: Unaccounted Risk: This creates immense, unquantifiable technical debt. Leadership does not know how many fixes exist, who owns them, or what systemic flaws they are masking, leading to sudden, catastrophic failure upon the hero's absence.

Consistent Architecture & Intentional Exceptions

Any item that is not an input in the I-O map is escalated. An executive-level decision maker must intentionally choose to:

1. **Formalize the procedure with a new I-O Contract,**
2. **Grant an Explicit Exception (and action the item themselves), or**
3. **Reject the problem as not worth solving and explicitly document such.**

Benefit: Eliminates Accidental Debt: Architecture only evolves via conscious, high-level business decisions, eliminating 'Institutional Inertia' and preventing accidental complexity from accumulating.

4. Undocumented Fixes (The Hero Problem)

Organizational gaps and input rejections are often picked up by an unofficial Single Point of Failure (SPOF) person who manually patches the workflow, bypassing formal processes and logging.

Risk: Unaccounted Risk: This creates immense, unquantifiable technical debt. Leadership does not know how many fixes exist, who owns them, or what systemic flaws they are masking, leading to sudden, catastrophic failure upon the hero's absence.

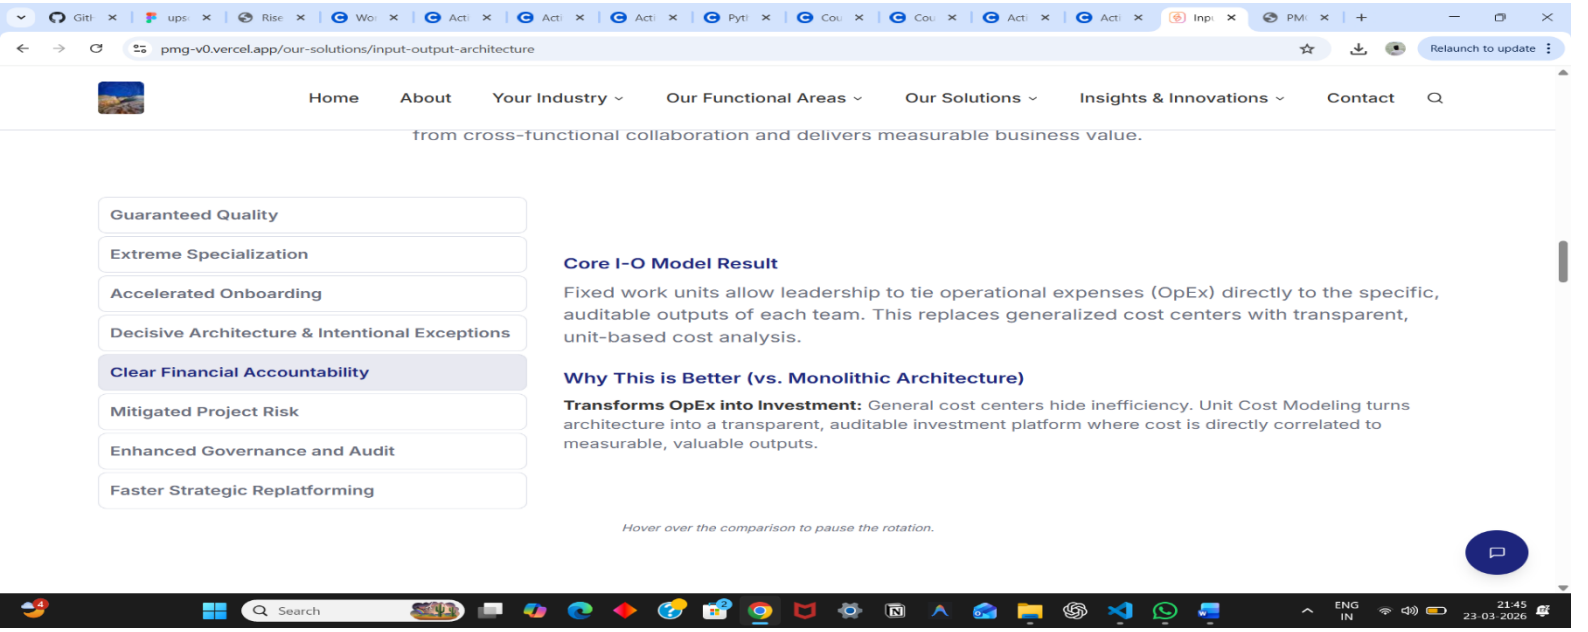
Defined Inputs, WorkUnits, & Outputs.

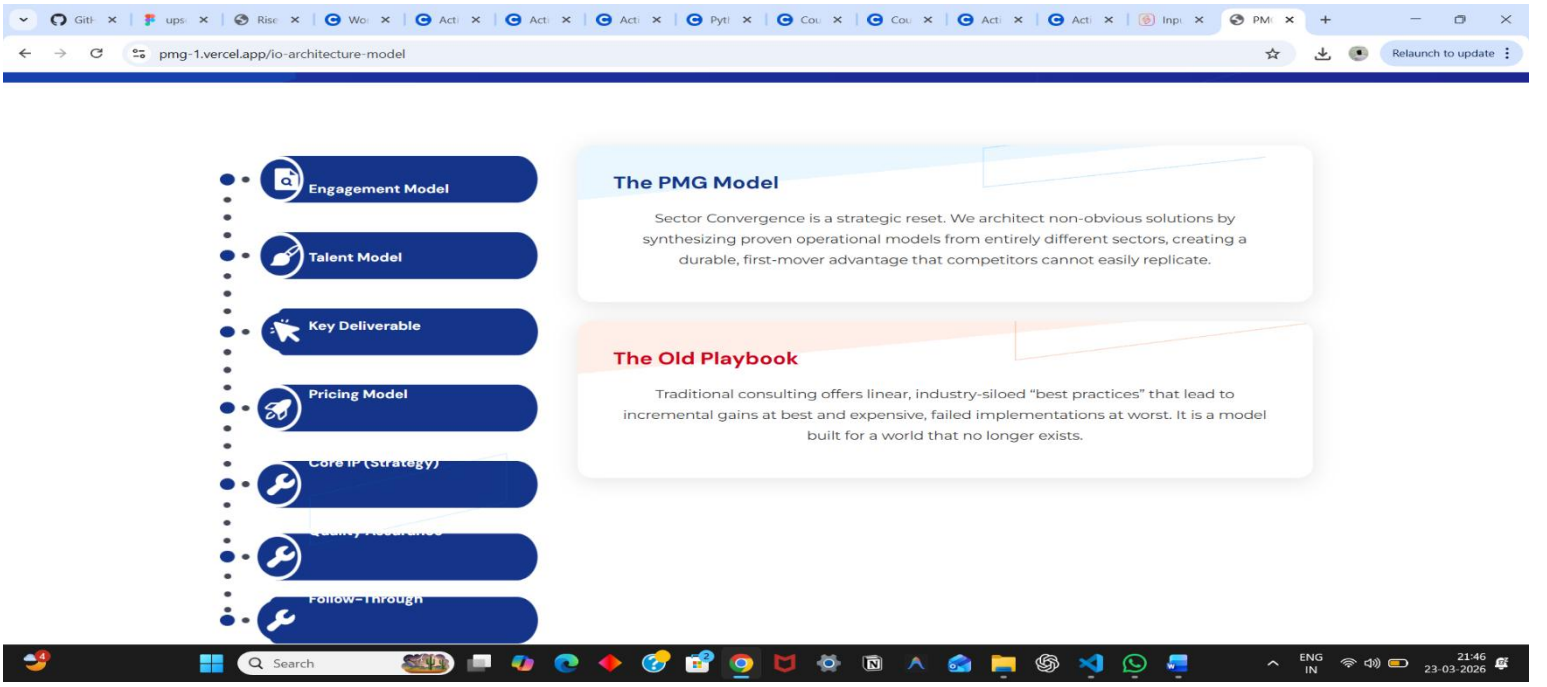
Any item that is not an input in the I-O map is escalated. An executive-level decision maker must intentionally choose to: Formalize the procedure with a new I-O Contract, Grant an Explicit Exception (and action the item themselves), or Reject the problem as not worth solving and explicitly document such.

Benefit: Eliminates Accidental Debt: Architecture only evolves via conscious, high-level business decisions, eliminating 'Institutional Inertia' and preventing accidental complexity from accumulating.

so these headings are not same

Consistency Through Constraint & Intentionality





these are not same in both websites there are different headings with diff content

after this there are some missing pages in one of website

these are missing contents:

1)The Blueprint for Scale

2)See The Engine in Practice

3)Core Concepts of the I-O Model

4)Architect Your Antifragile Advantage.
